## 适应网络的高功能单元 电力调整器

本公司的可控硅型电力调整器以其操作性及高度的信誉，在各个领域被广泛利用。本公司持续开发，制造了作为电力控制核心的半导体及可控硅元件。经多年提供电力调整器，深受大家的惠顾。以多年的实际成果为基础而开发的UF系列中，主电路部件采用了本公司的可控硅模块(绝缘型)从而实现了小型轻量化。提高了实装多数单元时的控制盘实际安装密度。控制电路部分，采用了数码控制方式。搭载了多彩的保护机能和选向机能，从而实现了性能的大幅度提高。不仅如此，还推出提高了控制性能的通用型SPU系列。

### Network conformance, high-performance unit

Our Thyristor Power Regulators are widely used in various fields with high maneuverability and reliability. Thanks to our outstanding technology of semiconductors including Thyristor developed and manufactured by ourselves, our Thyristor Power Regulators have been well accepted in all the markets of the world. The high-performance "UF series" developed by our long-standing expertise, has our own thyristor modules (insulating type) in the main circuit. It features compact and light-weight. Multiple units are mounted in a control pannel resulted in improvement of packaging density. The unit achieves outstanding performance by employing digital control system, various protective and optional functions. General-purpose SPU series models are also available with high control performance.

## Open Network Interface

**UF series** 适用于开放型现场总线网络

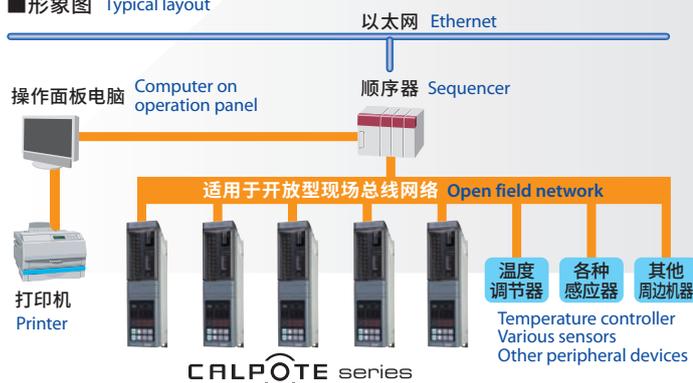

DeviceNet™ CC-Link

在业界中，本公司的产品，先驱搭载了DeviceNet等开放网络通信。通过这个功能可实现电脑，PLC等控制机器的相互连接，与机械的配备也很容易。将不需要通过RS232C等而开发复杂程序及专用线路板。(不能适应一部分機種)

### Designed for Open field network

As a pioneer of the industry, we designed a feature of open network communications, such as DeviceNet. Thanks to this outstanding function, the unit can be interconnected with computers, PLCs and other control devices, and get readily matched up with mechanical systems. Complicated jobs such as writing programs using specific communications by RS232C interface can be eliminated. Special PC boards are also not required by this outstanding function. (Some models are not applicable for this function.)

■形象图 Typical layout

1. 作为选项机能，在各单元上连接通信单元，可实现在同一电缆上连接最高63台单元。

Up to 63 units can be hooked up through the same cable by optionally adding the communication package to each unit.

2. 通过电脑可设定输出电压，电流，电力的监控程序及信号。

The output voltage, current and power can be readily monitored and the signal settings can be made on the computer.
